

OSINT INVESTIGATION REPORT

Google Dorking & Open Source Intelligence Analysis

Target Organization: Amazon.com, Inc. (NASDAQ: AMZN)

Fortune 500 Company Profile

Day 12: Google Dork Competition & Mini Project

OSINT Internship Curriculum — Week 2

Prepared by: Akhila

Date: July 17, 2026

Ethical OSINT Notice

All information in this report was gathered exclusively from publicly available sources using passive, non-intrusive OSINT and search-operator ("Google Dorking") techniques. No systems were accessed, no authentication was attempted or bypassed, and no vulnerabilities were probed or exploited.

Table of Contents

1. Company Overview
2. Company Website & Digital Footprint
3. Google Dorking Results
4. Social Media Presence
5. Technology Used
6. Recent News
7. Public Information Found
8. Conclusion

1. Company Overview

Legal name: Amazon.com, Inc.

Founded: July 5, 1994, in Bellevue, Washington, by Jeff Bezos (originally as Cadabra, Inc.)

Headquarters: Seattle, Washington, with a second headquarters presence in Arlington County, Virginia (HQ2)

CEO: Andy Jassy (President & CEO since July 2021); Jeff Bezos serves as Executive Chairman

Stock ticker: NASDAQ: AMZN — component of the Nasdaq-100, DJIA, S&P 100, and S&P 500

Industry: E-commerce, cloud computing (AWS), digital streaming, advertising, and consumer electronics — a diversified conglomerate

Employees: Roughly 1.3–1.5 million globally (varies seasonally with warehouse hiring)

FY2025 revenue: ≈ US\$716.9 billion, with operating income of ≈ US\$80.0 billion and net income of ≈ US\$77.7 billion

Core Products & Services

- Amazon.com — global e-commerce marketplace and retail platform
- Amazon Web Services (AWS) — cloud computing, storage, and AI infrastructure (EC2, S3, Bedrock, etc.)
- Prime — subscription bundling shipping, Prime Video, Amazon Music, and other perks
- Devices — Kindle, Echo, Fire TV, Fire Tablet, Ring, eero
- Amazon Ads — advertising and demand-side platform (DSP) business
- Amazon Pharmacy, One Medical, and other healthcare ventures
- Amazon MGM Studios, Twitch, and other media properties

2. Company Website & Digital Footprint

Primary website: www.amazon.com

Notable Subdomains Identified

Subdomain / Site	Purpose
ir.aboutamazon.com	Investor Relations — annual reports, SEC filings, shareholder letters
aboutamazon.com	Corporate newsroom, company facts, press releases
amazon.jobs / hiring.amazon.com	Careers and hourly hiring portal
aws.amazon.com	Amazon Web Services product and documentation site
docs.aws.amazon.com	AWS technical/developer documentation, including public sustainability and service PDFs
advertising.amazon.com	Amazon Ads newsroom and product information
sellercentral.amazon.com	Third-party seller portal (login-gated)
developer.amazon.com	Alexa/App developer resources

Key Pages

- Careers: www.amazon.jobs — job categories, teams, locations, and hourly hiring
- Investor Relations: ir.aboutamazon.com — annual reports, proxies, shareholder letters, SEC filings
- Newsroom: aboutamazon.com/news — company news and press announcements
- Sustainability: aboutamazon.com/planet — environmental and carbon-footprint reporting

3. Google Dorking Results

The queries below were run against Amazon's public web presence. Because Amazon operates a very large, well-secured, primarily dynamic (login/API-driven) web estate, most "aggressive" dorks (open directories, exposed spreadsheets, login panels) returned little to nothing indexed — which is itself a notable security finding. Dorks aimed at official public documents (PDF reports, investor materials, AWS documentation) were productive.

Dork Query	Purpose	Finding / Result
site:amazon.com filetype:pdf	Locate publicly indexed PDF documents	Sparse results on the core retail domain; most public PDFs live on aboutamazon.com , ir.aboutamazon.com , and docs.aws.amazon.com instead of amazon.com itself
site:ir.aboutamazon.com filetype:pdf annual report	Find official annual reports / shareholder letters	Locates annual reports, proxy statements, and CEO shareholder letters (Jassy 2021–2025, and Bezos's archived letters back to 1997)
site:docs.aws.amazon.com filetype:pdf sustainability	Find AWS sustainability documentation	Returns the public "AWS Sustainability User Guide" PDF describing Scope 1–3 emissions methodology
site:amazon.com filetype:xlsx	Look for exposed spreadsheets	No indexed results — consistent with a tightly access-controlled retail domain
site:amazon.com intitle:"index of"	Look for exposed directory listings	No indexed open directories found — good security hygiene
site:amazon.com inurl:investor	Locate investor-related URL paths	Redirects mostly resolve to ir.aboutamazon.com , the dedicated IR subdomain
site:amazon.com "confidential"	Check for accidentally indexed internal documents	No sensitive internal documents surfaced in public search results
site:linkedin.com "Amazon"	Enumerate company/employee presence on LinkedIn	Returns Amazon's official LinkedIn company page plus large numbers of public employee profiles
site:github.com Amazon	Look for official and community code repositories	Surfaces official orgs such as github.com/aws , github.com/amzn , and github.com/amazon-science with public open-source projects
"Amazon.com, Inc." filetype:pdf SEC	Find SEC filings referencing the company	Locates 10-K, 8-K, and proxy filings hosted on sec.gov 's EDGAR system

Note on methodology: only read-only, publicly indexed search results were viewed. No login pages were engaged beyond observing that they exist (e.g., sellercentral.amazon.com), and no attempt was made to authenticate or bypass any access control.

4. Social Media Presence

Platform	Observation
LinkedIn	Official "Amazon" company page with corporate updates, job postings, and a very large public employee footprint discoverable via site:linkedin.com dorks
X (Twitter)	Multiple official handles (e.g., @amazon, @AWScloud, @AmazonNews) used for customer service, product news, and PR
Facebook	Official Amazon page used primarily for brand and retail promotion
Instagram	Official Amazon and sub-brand accounts (e.g., Amazon Music, Prime Video) for visual/product marketing
YouTube	Official channels for Amazon, AWS, Prime Video, and device product lines, hosting keynotes (e.g., AWS re:Invent) and ads

5. Technology Used

Web & Infrastructure

- Cloud provider: Amazon Web Services (AWS) — unsurprisingly, Amazon runs its own web presence on its own cloud infrastructure
- CDN: Amazon CloudFront, AWS's globally distributed content delivery network
- Compute/storage back end: publicly documented AWS building blocks such as EC2, S3, DynamoDB, and Aurora underpin Amazon's retail platform, per AWS's own architecture documentation
- Front-end technologies observed by third-party scanners (e.g., BuiltWith, W3Techs) include custom-built content management, React-based components, and Java-based services on the retail site

Security Posture Observations (Passive Only)

- No open directory listings or exposed spreadsheet/document files were discoverable via search-engine dorking on the primary amazon.com domain
- Sensitive functions (seller login, employee portals) sit on dedicated, clearly access-controlled subdomains rather than being exposed on the main retail domain
- Public technical documentation (AWS docs, sustainability PDFs) is intentionally published and well organized, suggesting a deliberate content-publishing strategy rather than accidental exposure

This assessment is based solely on what is discoverable through search engines and public scanning aggregators — no active scanning, header inspection tooling, or direct probing of Amazon's infrastructure was performed.

6. Recent News

Acquisitions & Partnerships

- Fauna Robotics — most recent acquisition (robotics solutions), completed March 2026

- AWS expanded its partnership with OpenAI, bringing models to Amazon Bedrock and launching Codex on Bedrock (2026)
- AWS and Cerebras partnered to deliver fast AI inference through Amazon Bedrock (March 2026)
- Zoox (Amazon's autonomous-vehicle unit) formed a multiyear robotaxi partnership with Uber (March 2026), starting in Las Vegas
- Asda (UK retailer) partnered with Amazon to expand its retail media offering in the UK

New Products & Initiatives

- Amazon Quick — a new AI assistant for work, announced at the "What's Next with AWS" 2026 event
- Amazon Connect expanded into agentic AI solutions spanning supply chain, hiring, customer experience, and healthcare
- Amazon Pharmacy expanded same-day medication delivery to nearly 4,500 U.S. cities and towns
- Amazon One Medical introduced "Health Insights" to help patients interpret lab results
- Creator Hub launched on Fire TV for YouTube videos and podcasts

7. Public Information Found

Annual Reports & Financial Disclosures

- Annual reports, proxy statements, and CEO shareholder letters (Jassy, 2021–2025; Bezos archive back to 1997) published at ir.aboutamazon.com
- SEC filings (10-K, 8-K, DEF 14A) publicly available via both Amazon's IR site and SEC EDGAR
- Quarterly earnings results and press releases distributed via Business Wire and mirrored on aboutamazon.com

Sustainability Reporting

- AWS Sustainability User Guide (public PDF) detailing Scope 1–3 emissions methodology
- Broader corporate sustainability content published under aboutamazon.com/planet

Job Postings

- Thousands of open corporate, tech, and hourly warehouse roles listed at amazon.jobs and hiring.amazon.com, searchable by category, team, and location

Public Contact Information

- Corporate headquarters phone number and mailing address publicly listed on investor and corporate information pages
- Investor Relations maintains a named public contact (Director of Investor Relations) for shareholder and analyst inquiries

8. Conclusion

What Information Was Easily Available?

A substantial amount of legitimate business intelligence on Amazon is intentionally public: leadership structure, financial performance, annual/sustainability reports, SEC filings, job openings, investor contact details, and a large official social media and open-source (GitHub) footprint. This information is well-organized and hosted on clearly designated subdomains (ir.aboutamazon.com, aboutamazon.com, docs.aws.amazon.com) rather than scattered across the primary retail domain.

Security Observations

- Amazon's core retail domain shows no evidence of indexed open directories, exposed spreadsheets, or accidentally published confidential files — a sign of disciplined web-hygiene and access control at scale
- Sensitive or credentialed functionality (seller accounts, employee tools) is segregated onto dedicated subdomains rather than mixed with public marketing content
- Amazon uses its own cloud and CDN infrastructure (AWS/CloudFront) for its public web presence, which brings enterprise-grade DDoS and edge protections by default
- The bulk of "sensitive-sounding" dorks (login panels, confidential markers, spreadsheets) returned negative or irrelevant results — illustrating that a large, mature organization's biggest OSINT exposure tends to come from official disclosures and employee-level metadata (e.g., LinkedIn), not misconfigured web servers

Overall, this exercise reinforces a core OSINT lesson: for a well-resourced Fortune 500 company, the richest intelligence typically comes not from technical misconfigurations but from the organization's own deliberate public disclosures — financial filings, press releases, job postings, and social media — combined with careful use of search operators to organize and surface that information efficiently.
